

# **FieldWorker™**

## **FieldWorker ASP**

The FieldWorker Enterprise solution has been adapted for delivery over the Internet. Using FieldWorker as your Application Service Provider (ASP) for mobile data collection means you get the full capabilities of an enterprise solution, with no up-front costs. All you need to worry about is getting mobile devices for your data collectors and we'll have them collecting and synchronizing data in several days!

### **No Up Front Costs**

Mobile data collection may not be critical to the day-to-day operation of your company and it can be expensive and complicated to set up. The relatively large upfront investment of a full enterprise solution may be difficult for many companies to justify.

*"We find that many of our customers want to experiment with mobile data collection and synchronization without the expense of setting up the infrastructure to handle it, so it's much easier for them to use FieldWorker ASP. Once you progress to a large number of users, the economics change in favour of licensing the product."*

*- Peter Neve, President, FieldWorker Products*

### **Start Collecting Data Now!**

Setting up the FieldWorker ASP system makes a lot of sense when there are severe time constraints. Implementing full enterprise systems can take several weeks, while using FieldWorker ASP can put you in a position to start your mobile data collection in a matter of days.

### **Utilization Pricing**

The ASP model has a particular advantage over traditionally licensed products, in that it can be switched on and off whenever it is required. Therefore if your business is seasonal or you have a wide array of data collectors in the field, we make sure that your costs are reflective of how many users are collecting data in any given month. Whenever you need to deploy new users or change the application you are using, you simply direct your change request to FieldWorker's support team, and the work is done right away at a minimal cost.

### **Experience Pays**

With FieldWorker ASP, you're able to leverage FieldWorker's mobile data collection knowledge base and avoid mistakes to achieve return on your software investment more quickly.
